

Stream Live Video with Flash Media Encoder 2

It's a free download!

Adobe® Flash® Media Encoder 2 is designed to enable you to capture live audio and video while streaming it in real-time to Flash Media Server or with one of our partners through the Flash Video Streaming Service program. When high-quality streaming is your top priority, Flash Media Encoder 2 helps you broadcast live events 24x7 such as concerts, webcasts, educational courses and promotional events.

With an intuitive user interface that works seamlessly with plug-and-play cameras and microphones, and compatible analog-to-digital converters, Flash Media Encoder 2 features Flash video (VP6) technology to deliver high-quality footage that provides size and bit rate flexibility. You also get full audio control with bit-rate efficient Nelly-Moser or MP3 encoding.

Flash Media Encoder 2 can also be tightly integrated into your streaming pipeline with command-line control both locally and through a remote connection. Auto-restart after power failures or other system re-starts helps ensure that your live streams are reliably available 24x7, 365 days a year.

Flash Media Encoder is free and can be downloaded [here](#).
